Assignment 1 (10%)

Important Notes:

- This is an individual assignment.
- I will be checking for borrowed or copied assignments. All work is to be done from scratch, you may not use any templates or other assistance.
- This assessment is out of 55 marks total.

Background:
The purpose of this assignment is to provide you with hands-on experience with HTML and CSS.

Tasks:
Create a web page on a topic of your choice. Use well-formed HTML5 structure including use of semantic elements. The design/colour scheme of the web page is your choice. The following are the minimum requirements:

1. Set a container width of the page such that all the page content sits within that width and the entire page is centered within the browser. Hint: usually a width of 1200px to 1300px works well. **(2 marks)**
2. A header section with a logo image and a tag line. **(5 marks)**
3. A section after the header with 4 links to act as navigation of the page. The links can be empty or go to different web pages. **(10 marks)**
4. A hero image after the navigation. The hero image should have some text overlay on it. **(5 marks)**
5. A sidebar on the right or left side of the main content. The sidebar should have at least a heading in appropriate heading tag and a list of items. **(5 marks)**
6. Main content of the page with at least the following: **(10 marks)**
    - A heading in H1 heading tag.
    - An HTML comment under the H1 tag with your name and email.
    - One section with an image.
    - One full width section with text that has a sub heading and paragraphs.
    - Some text that is a hyperlink to some other page. You can send it to YouTube/Google/another page of your choice.
7. Add a footer to the page with a copyright symbol, current year and your name/email. **(3 marks)**
8. **CSS requirements:**

- There should be appropriate space between different elements, so set the margins and paddings such that different elements are at least 20 pixels away from other elements. This enhances the overall design of the page. **(5 marks)**
- Adjust the CSS to use your own colour scheme/design elements as you see fit. **(2 marks)**
- Adjust the CSS to use a background on at least 3 sections on the page. Make sure the site is still legible. **(3 marks)**
- Adjust the CSS to use your own font scheme. **(5 marks)**

Submissions:
Follow these steps to submit your task using **VS Code and GitHub**:

1. Repository Naming & Setup

- Ensure your project folder is named using the following format: prog1246-assignment1-your_initials *(e.g., prog1246-assignment1-jp)*.
- Make sure your complete solution is contained inside this folder, including any .html/.css files and any image assets.

2. Stage, Commit, and Push via VS Code

1. Open the **Source Control** tab on the left sidebar in VS Code (Ctrl+Shift+G / Cmd+Shift+G).
2. **Committing Changes**:
    1. If this is the first commit, click the *Initialize Repository* button to stage your changes locally. Then proceed to the next step.
    2. If this is NOT the first commit, proceed to the next step.
3. Type a clear commit message in the message box.
4. Click the **Commit** checkmark button.
5. Click **Publish Branch** (or **Sync Changes** at the bottom left) to push your commits to your GitHub account. Ensure the repository visibility is set to **Public**.

3. Submit to eConestoga

- Open your browser and navigate to your new repository on GitHub.com.
- Verify that all your files and your latest commit are visible online.
- Copy your repository URL *(e.g., https://github.com/your-username/prog1246-assignment1-your_initials)*.
- Paste your GitHub repository URL into the text submission box OR in a text file for the **In-Class Task 1** dropbox on eConestoga and submit.
